

# Create a Flask Project

## TEAM ID: PNT2022TMID22391

### app.py

```
from flask import Flask

app = Flask(__name__)

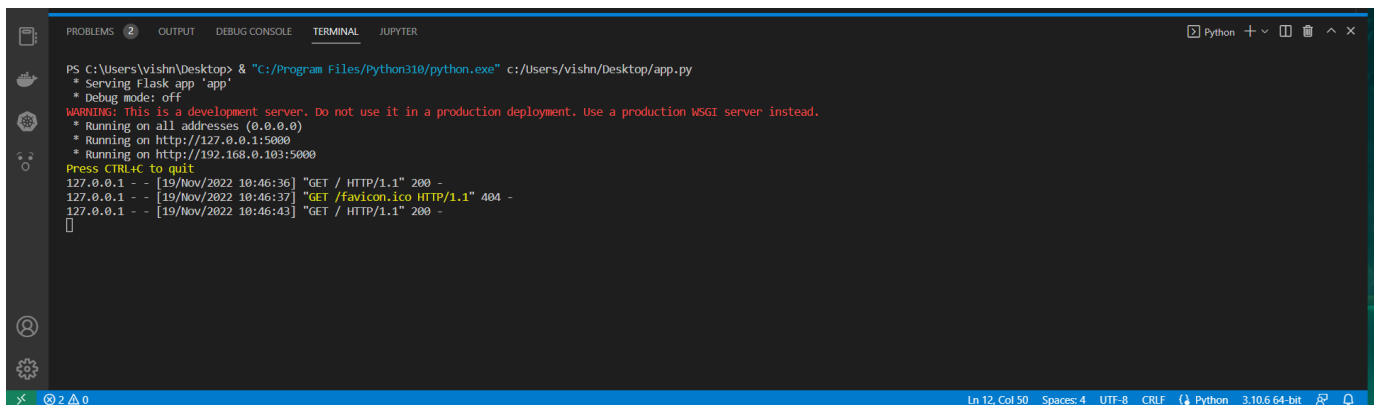

@app.route('/')

def index():

    return 'Hello World!\n'

if __name__ == '__main__':

    app.run(host='0.0.0.0')
```

The screenshot shows a JupyterLab interface with a terminal window open. The terminal displays the command to run the Flask application and its output. The output includes a warning about the development server, the addresses it is running on, and a list of HTTP requests and responses.

```
PS C:\Users\vishn\Desktop> & "C:/Program Files/Python310/python.exe" c:/Users/vishn/Desktop/app.py
* Serving Flask app "app"
* Debug mode: off
WARNING: This is a development server. Do not use it in a production deployment. Use a production WSGI server instead.
* Running on all addresses (0.0.0.0)
* Running on http://127.0.0.1:5000
* Running on http://192.168.0.103:5000
Press CTRL+C to quit
